

BUG DETECTOR

Bedbugs lurk in cracks and crevices and they've been living on human blood for centuries. Bedbugs often invade new areas after being carried there by clothing, luggage, furniture or bedding. Keeping a clean environment isn't enough to protect your property from being invaded. Early detection is the only effective way to avoid an infestation.

HOW TO USE:

Place a BUG DETECTOR Bug Monitor under each corner of the mattress, behind headboards, in furniture and any other place that bedbugs or other insects maybe introduced. Then routinely check the BUG DETECTOR for any sign of bug activity. BUG DETECTOR will attract and trap bedbugs and insects in the area showing you where you need to treat before an infestation takes place. For best results treat the area with "DESTROY Bedbug Eliminator". Once treated replace the BUG DETECTOR for future monitoring.
